Week-5 Assignment

Design a function that takes three integer numbers and checks if they are sorted in ascending order (from smaller to larger, E.g. 1, 3, 8 OR 4, 10 , 29). If so, the function must return the string "YES !!! they are sorted ". If not, the function should return the biggest number. E.g. for those numbers (1,19,6), the function should output 19, because they are not sorted and the max is 19.
